A: For your last question try something like: At our end of year gathering, we discussed the following three topics. As always, please feel free to comment with your own views. We each received 4 envelopes. In the first, we were asked to create 4 goals for the coming year. In the second, we were asked to think about where we want our life to be in 5 years. We were then asked to create a short vision for that future. Then, we were asked to rate our own current life based on that short vision and set a target for this year. 1) Questions for Others: a) How do you see yourself in the next five years? b) What are your goals for this year? c)

Where do you want your life to be in 5 years? d) How do you want your life to be different in 5 years? 2) The Economy: a) What does the economic situation mean to you personally? b) What does the economic situation mean to you professionally? c) What do you think of the current economic situation? What are the implications for you personally? 3) Generosity a) What do you think about the state of generosity in your community? b) Why do you think we're all drawn to give and receive? c) What are some things you're going to do to give back this year? d) What's most important to you in your life right now? What will you

do this year to improve your life?Q: Getting data from a Model in the middle of the code I am using GameKit and I am struggling with something that seems simple. I have a small app that allows you to match other players from the same app. My

problem is that I have a model that is used by my Controller. In my Controller, I am using the model to get an ID and then I'm using the same model to get data for the particular player I'm trying to match against. The problem is, is that in the middle of my code, I can't have a reference to the model that is in use in the Controller. This is my code: `-(void)match:(GKMatch *)
